Clinical Training Workshops

TRAINING WORKSHOPS (Knowledge Exchange)

Since 2004, I have given over 160 two-day intensive training workshops addressing the assessment and clinical management of psychosocial risk factors for delayed recovery. These workshops have been held in several countries including Australia, Canada, France, Ireland, New Zealand, Sweden, South Africa and the United States. The target audiences for these knowledge exchange activities have been varied including psychologists, social workers, physicians, nurses, physiotherapists, occupational therapists, kinesiologists, vocational rehabilitation counsellors, and case managers.

From 2004 to 2011, I gave 42 one-day intensive training workshops addressing the prevention of psychosocial risk factors for delayed recovery. These workshops were tailored to employees of injury and disability insurers.

In 2021, I provided 4 webinars on the topic of catastrophizing for the education program for Alberta rural PT and OT staff. Alberta, Canada.

In 2022-23, I provided 4 webinars to WorkSafeBC on the topic of catastrophizing and delayed recovery. British Columbia, Canada.

In 2022-23, I provided 7 webinars on the topic of catastrophizing and perceptions of injustice to Labor and Industry. Washington, USA.

In 2022-23, I provided 4 webinar to staff of LifeMark Health Group on the topic of catastrophizing. Alberta, Canada.

Impact of Research Dissemination and Knowledge Exchange Activities

In 1995, we published the Pain Catastrophizing Scale (PCS). The PCS has been translated into 30 languages and has been incorporated in the clinical assessment protocols of pain clinics and rehabilitation centres around the world. The paper describing the development of the PCS (Sullivan et al., 1995) has been cited over 10,000 times; a theory paper addressing the processes underlying pain catastrophizing (Sullivan et al 2001) has been cited over 5,000 times and was listed as one of the top 5 citation classics in pain research between 2000 and 2010 (J Anesth (2012) 26:85–93).

In 2008, we published the Injustice Experiences Questionnaire (IEQ; Sullivan et al., 2008). The publication of this scale prompted hundreds of studies examining the deleterious effects of injustice appraisals on recovery trajectories following debilitating injury. Our work on psychosocial risk factors for delayed recovery has played an important role in treatment-related policy for numerous injury insurers and workers compensation boards such as SIRA (AU), Labor and Industry (USA),

WSIB, CNESST and WorkSafe BC (Canada). Our research on psychological predictors of adverse recovery outcomes reflects successful efforts to work collaboratively with varied agencies and user groups to maximize the scientific and clinical impact of research findings.
